What is SEER?

SEER stands for Seasonal Energy Efficiency Ratio. It is critical to understand what SEER means when purchasing a new air conditioner. Essentially, the higher the SEER rating on your AC, the more energy Efficient it will be and the more money you will save!

Did you know that a 10 year old AC may have a SEER rating of 8 or lower?

If so then you may be spending double the money on your hydro bill than you would be with a new Air Conditioning unit.

Seasonal AC Maintenance

It is recommended that you have you Air Conditioner inspected prior to turning it on for the summer months. This will ensure your system is running at its peak efficiency since the lifespan of an AC does not exceed 15 years, as per **ASHRAE**.

It could also identify potential problems before they occur. Just like a car, your AC needs a regular tune up which includes:

- cleaning condenser coils
- test for refrigerant leaks
- check and verify all safeties
- tune system operation to ensure maximum efficiency
